### Sharp Knife....Happy Life

How many times have you taken your knife out to start field dressing and you can't even stick it through the skin.....you forgot to sharpen it. So you hunt around in your pack for your knife sharpener and it has magically disappeared. Well, I have the solution for you. The folks over at Klawhorn Industries, Inc. have a knife sharpener that is made in America (except for the steel blades that are made in Germany). There are enough different models to choose from. The smallest of these can actually attach to your knife sheath so you will have it with you all of the time. They will sharpen the smallest and the largest knife the you have.

I was at the 2008 Deer and Turkey Expo in Madison Wisconsin and happen to have a booth directly across from Klawhorn. These gentlemen are upright people that stand behind their product and believe in it as well. They sold out of one model that I wanted but needless to say I will be ordering from them shortly.

I can not say enough about a sharp knife for field dressing, skinning or whatever you need on a hunting trip. A dull knife is more dangerous than a sharp knife. With a dull knife you tend to force the cut and with all of that pressure and exertion dull knives tend to slip cutting yourself or worse, stabbing yourself which is something that you don't want to do in the field.

So head on over to <http://www.klawhorn.com/> and take a look at their products. You just can't beat a great knife sharpener to get the job done.
